STEPS

1 PAINT

Lay down a drop cloth or other material to protect the ground from dripping paint. Using a paint roller, apply two coats of chalkboard paint. Relax and let the paint dry. This might take a few hours depending on the humidity and your climate.

2 MEASURE & MARK

Measure the placement of your stencils so they're evenly distributed across the wall. A chalk line or a piece of string will make it easier to keep your stencils aligned while you work. Remember to keep space available for chalk holders.

3 TAPE THE STENCILS

Tape your stencils to the wall. Add cardboard or scrap paper around the perimeter of the stencils to prevent spraypainting beyond it. You can touch up the wall with chalkboard paint later, if needed.

4 SPRAYPAINT

Shake your can well and spray in light strokes. Press the stencil down with your other hand to make crisp lines. Pull off the stencil to move to the next space and keep on keeping on.

5 TOUCH-UPS

After the spraypaint dries, use a small paintbrush or a foam brush to touch up the wall with chalkboard paint where needed. Be sure to cover any distracting areas of "ghosting" from the white spraypaint.

6 ADD CHALK & HOLDERS

Attach chalk holders with nails or screws. You can use any weather-proof container that allows rain to pass through. Add chalk and let the sharing begin! Write a few thoughtful responses to set the tone and help stir people's minds about their own ideas.
